

## Allegato 5

### Struttura di DatiAtto.xml

Per la definizione di *DatiAtto.xml* sono usati gli *XML-Schema (XSD)*, strutturati allo scopo di fornire un insieme di specifiche estendibile ed espandibile, sfruttando in particolare i meccanismi dei “tipi xml” disponibili negli XML-Schema.

I file .xsd sono riportati alla fine del presente allegato e sono disponibili, in formato elettronico, all'indirizzo:

<http://www.processotelematico.giustizia.it/pdapublic/resources/file/XSD/>.

È stato definito un dizionario di tipi xml idoneo per la composizione delle varie tipologie di atto. La figura che segue riporta la struttura dei namespace:

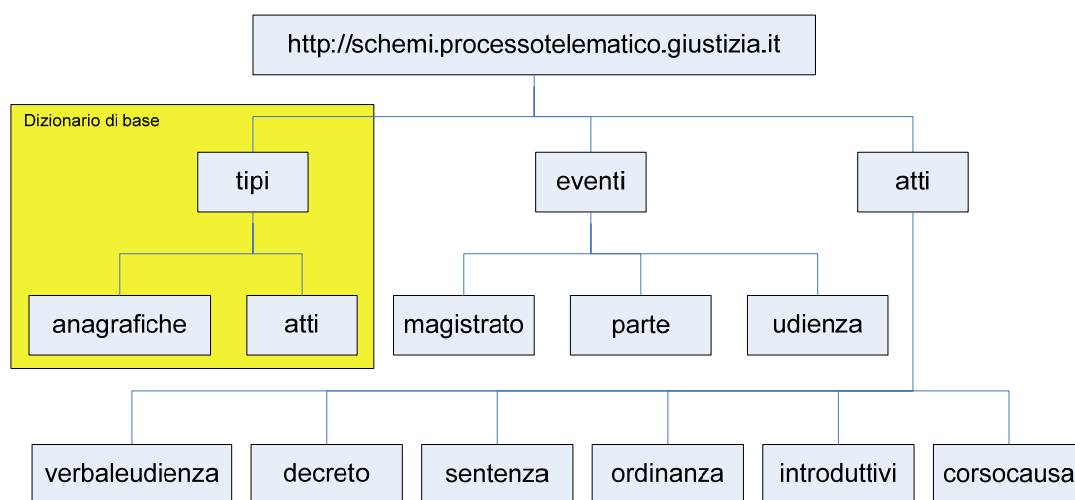

Figura 1 - Struttura dei namespace per DatiAtto.xml

### Dizionario di base

Il dizionario di elementi per la definizione dei dati relativi all'atto si costituisce di tre namespace fondamentali:

- <http://schemi.processotelematico.giustizia.it/tipi/>: è definito nel file *tipi-base.xsd*; lo schema contiene estensioni di tipi base XML, del tipo float con formati particolari, stringhe con formati particolari e così via; le codifiche definite sono tutte auto descritte utilizzando gli elementi di commento e documentazione proprie della specifica degli XML Schema; in altre parole ad ogni elemento della enumerazione è associata tramite tag *annotation* l'opportuna descrizione.
- <http://schemi.processotelematico.giustizia.it/tipi/anagrafiche/>: è definito nel file *tipi-anagrafiche.xsd*; lo schema contiene la definizione dei tipi di anagrafica necessari alla definizione delle strutture dati; ad esempio è definito il tipo Parte, il tipo Avvocato e così via;
- <http://schemi.processotelematico.giustizia.it/tipi/atti/>: file *tipi-atti.xsd*; lo schema contiene la specifica dei tipi base utilizzati per la definizione delle strutture dati relative ai dati dell'atto.

In particolare sono stati dichiarati due tipi xml astratti per la modellazione di tutti gli atti come appresso riportato.

- **AttoIntroduttivo:** modella le caratteristiche comuni di tutti gli atti introduttivi, cioè la specifica dell'anagrafica del procedimento, in altre parole l'indicazione degli avvocati e delle parti coinvolte nonché l'oggetto di merito della causa. La definizione di questa tipologia base di atto è conforme alle informazioni che il sistema di cancelleria richiede al momento dell'iscrizione al ruolo.
- **AttoProcedimento:** modella il generico atto in corso di causa, sia esso di parte, dell'incaricato dal giudice o del magistrato. Si tratta in ultima analisi di legare l'atto a un procedimento in essere all'interno dei sistemi di cancelleria.

Lo schema inoltre introduce il tipo xml base per tutti gli eventi del sistema di cancelleria, il tipo "IstanzaEvento".

### **Dizionario di registro**

Il Dizionario di Registro definisce le strutture degli atti propri del registro in essere, nel contesto del PCT i registri supportati erano: Contenzioso Civile e Diritto del Lavoro.

Per completezza, nel seguito si descriveranno brevemente i namespace definiti. I namespace (e relativi file .xsd) sopra elencati servono per la costruzione dei dizionari relativi al registro o sistema di interesse costituito dagli atti e dagli eventi scaricabili da questi. Con evento si intende qui il nome dell'evento e, laddove praticabile, il nome ed il tipo dei parametri o meglio delle informazioni necessarie allo scarico dell'evento stesso.

L'utilizzo del nome dell'evento, e non del relativo codice, ha il vantaggio di non esporre i dettagli implementativi dei sistemi di cancelleria e oltretutto offre un ulteriore grado di libertà, non è detto infatti che allo stesso nome evento definito nella struttura XML corrisponda sempre lo scarico dello stesso evento sui sistemi di cancelleria; l'evento potrebbe ad esempio essere funzione dello stato del fascicolo oppure del valore di un parametro. Questo permette di ridurre la specifica dei tipi XML per i vari eventi e permette una maggiore flessibilità di gestione da parte dei sistemi di cancelleria.

A partire dai namespace base descritti al paragrafo precedente per quanto riguarda i registri afferenti il giudizio di cognizione sono stati definiti i seguenti schemi:

- <http://schemi.processotelematico.giustizia.it/eventi/magistrato>  
File 'eventi-magistrato.xsd'. Lo schema contiene la definizione di tutti gli eventi scaricabili da atti del magistrato.
- <http://schemi.processotelematico.giustizia.it/eventi/parte>  
File 'eventi-parte.xsd'. Definizione di tutti gli eventi scaricabili da atti di parte.
- <http://schemi.processotelematico.giustizia.it/eventi/udienza>  
File 'eventi-udienza.xsd'. Definizione degli eventi scaricabili da un verbale di udienza.

Le tipologie di atti producibili a partire dagli elementi costitutivi elencati in precedenza sono organizzate in namespace in modo da essere classificate per macro tipologia.

Gli atti del magistrato possono essere classificati nei seguenti namespace:

- <http://schemi.processotelematico.giustizia.it/atti/Decreto>
- <http://schemi.processotelematico.giustizia.it/atti/Ordinanza>
- <http://schemi.processotelematico.giustizia.it/atti/Sentenza>

Gli atti di parte nei seguenti namespace:

- <http://schemi.processotelematico.giustizia.it/atti/Introduttivi>
- <http://schemi.processotelematico.giustizia.it/atti/CorsoCausa>

I verbali di udienza nei seguenti namespace:

- <http://schemi.processotelematico.giustizia.it/atti/VerbaleUdienza>

## Versioning

La gestione del versioning negli XML Schema può essere implementata utilizzando due approcci:

**1. utilizzo dell'attributo 'version' dell'elemento schema.**

L'utilizzo dell'attributo ha il vantaggio di essere nativo della specifica e di permettere la non proliferazione dei namespace nel caso vengano prodotte molte versioni.

Lo svantaggio maggiore è quello di non poter referenziare esplicitamente una determinata versione per la validazione.

**2. modificare il namespace di definizione dello schema.**

Ogni nuova versione ha un suo namespace ben definito che riporta all'interno del nome il numero della versione stessa.

L'approccio ha lo svantaggio di far proliferare in maniera eccessiva i namespace nel caso di frequenti modifiche, ma allo stesso tempo è possibile effettuare la validazione riferendosi ad una specifica versione, è sufficiente referenziare il namespace opportuno.

Nell'ambito della specifica in oggetto la gestione del versioning utilizza una combinazione dei due approcci.

L'introduzione di modifiche che non inficiano la validazione di documenti scritti con la versione precedente è da ritenere di lieve entità per cui il nuovo rilascio seguirà il primo approccio. Ad esempio, la definizione di nuovi elementi/tipi nel contesto di namespace già definiti o l'introduzione all'interno di elementi già definiti di parti opzionali non compromette la validazione di documenti precedenti, per cui è sufficiente modificare l'attributo 'version' dello schema per identificare la nuova versione. In questo caso il primo approccio è da preferire perché soprattutto nelle fasi iniziali del progetto le modifiche di lieve entità potrebbero essere numerose.

L'introduzione di modifiche strutturali, come ad esempio la modifica del modello di un elemento (scelta o sequenza) o la modifica dell'obbligatorietà/molteplicità di elementi o parti di essi già definiti, compromette la validazione di documenti prodotti in precedenza. Tali interventi sono da ritenere di entità significativa quindi per la validazione è fondamentale referenziare il namespace (la versione) corretto. Per questa ragione il secondo approccio è preferibile.

A fronte della pubblicazione delle nuove versioni quelle non aggiornate sono mantenute come deprecated per un periodo necessario a permettere l'adeguamento dei sistemi di redazione esterni al termine del quale la versione deprecated sarà dunque dismessa.

## Estensione ai registri delle Esecuzioni

Data la profonda differenza giuridica e sistemistica esistente tra i registri afferenti all'area del Contenzioso Civile e quelli relativi alle Esecuzioni Civili e Concorsuali si è scelto di non estendere i namespace descritti in precedenza con l'introduzione di nuovi atti, ma piuttosto di definirne di nuovi ed organizzarli in maniera più logica e strutturata. Ad esempio nella loro denominazione è stato inserito anche il riferimento al soggetto che redige l'atto, questo permette una migliore e più rapida classificazione della macrotipologia di atto.

L'organizzazione dei namespace è visibile nella figura seguente.

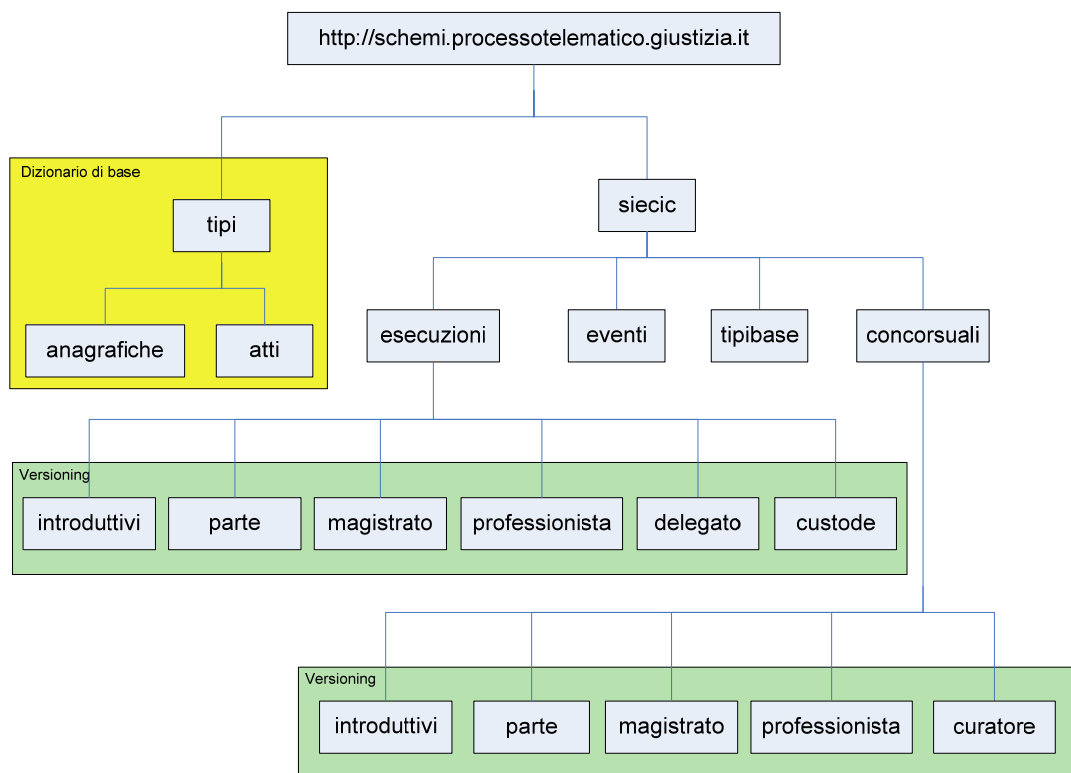

Figura 2 - Organizzazione namespace estensione PCT

In particolare, i vocabolari di base descritti ai paragrafi precedenti sono stati estesi introducendo nuovi tipi di utilità svincolati dal particolare registro, per ora sono impiegati unicamente nella definizione degli atti oggetto del presente documento, ma dato il loro carattere generale potrebbero essere inclusi anche nelle future modifiche agli atti riguardanti i registri dell'area del Contenzioso. Gli atti dei registri delle Esecuzioni Individuali e Concorsuali sono definiti in namespace di registro dedicati, in dettaglio:

- <http://schemi.processotelematico.giustizia.it/siecic/eventi>

Il namespace definisce tutti gli eventi scaricabili da un atto. Fa parte del dizionario dell'estensione, costituisce cioè un componente costitutivo della specifica degli atti.

- <http://schemi.processotelematico.giustizia.it/siecic/tipibase>

Contiene la specifica di tipi base necessari per la costruzione degli atti, anche questo namespace fa parte del dizionario dei registri oggetto dell'integrazione.

A partire dal dizionario di base e dai due dizionari elencati in precedenza vengono definiti gli atti organizzati secondo namespace soggetti alle regole di versioning delineate in 0.

Per il registro delle esecuzioni civili si ha:

- <http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/introduttivi>

Namespace degli atti per l'iscrizione del procedimento nel registro.

- <http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/parte>

Namespace degli atti producibili dai difensori delle parti.

- <http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/magistrato>

Namespace degli atti producibili dal magistrato.

- <http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/professionista>

Namespace degli atti producibili dai periti e dai consulenti di parte.

- <http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/delegato>

Namespace degli atti producibili dai delegati.

I suddetti namespace sono soggetti alle regole di versioning per cui per identificare la prima versione degli atti di parte occorrerà scrivere:

<http://schemi.processotelematico.giustizia.it/siecic/esecuzioni/parte/v1>.

Eventuali successive versioni saranno identificate con la stringa "v2" → "vN".

Visto quanto sopra, per il registro delle Esecuzioni Concorsuali si sono definiti:

- <http://schemi.processotelematico.giustizia.it/siecic/concorsuali/introductivi>
- <http://schemi.processotelematico.giustizia.it/siecic/concorsuali/parte>
- <http://schemi.processotelematico.giustizia.it/siecic/concorsuali/magistrato>
- <http://schemi.processotelematico.giustizia.it/siecic/concorsuali/professionista>
- <http://schemi.processotelematico.giustizia.it/siecic/concorsuali/curatore>

Quest'ultimo namespace definito per le sole Procedure Concorsuali definisce le strutture degli atti producibili dai curatori fallimentari.

### **Nullabilità**

L'integrazione dei registri delle Esecuzioni Individuali e Concorsuali non modifica l'architettura generale della specifica nel suo complesso, tuttavia presenta alcune caratteristiche peculiari rispetto agli altri registri dell'area civile che necessitano di una opportuna gestione.

La maggior parte degli elementi che veicolano informazioni significative per i sistemi di cancelleria sono opzionali anche nel caso dei registri in oggetto, questo per condividere la filosofia per cui *DatiAtto.xml* deve servire da ausilio ai sistemi di cancelleria, ma non è assolutamente richiesto che il depositante ne specifichi in maniera completa ogni sua parte, in modo da mantenere bassa la complessità e di incentivare l'instaurazione di *best practice* per l'utilizzo di tali strumenti, cioè maggiore è l'informazione specificata, migliore e più efficiente sarà il recepimento dell'atto e quindi il *workflow* del procedimento.

Nei registri in questione occorre però distinguere, soprattutto per fini statistici e di controllo gestione, i casi in cui l'informazione non è stata fornita perché non specificata oppure perché non applicabile.

L'implementazione del requisito è effettuata tramite l'utilizzo dell'attributo *nillable* previsto dalla specifica XML Schema introdotto per formalizzare tale distinzione. L'attributo è specificato nella definizione di ogni elemento relativo alle informazioni per i sistemi di cancelleria. Nei documenti prodotti se l'informazione (elemento) ha l'attributo "*nil*" impostato a "*true*" il dato per i sistemi di cancelleria è da ritenere non presente perché non applicabile, mentre se l'informazione (elemento) viene omessa significa che non è presente perché non fornita.

### **Demarcazione informazione**

Il carattere opzionale delle informazioni utili introduce nel caso dei registri in oggetto un ulteriore aspetto da tenere in considerazione: dato il loro notevole numero è utile segnalare, documentare o semplicemente marcare tutte quelle informazioni che, se fornite, possono agevolare in maniera significativa l'intervento del personale di cancelleria. L'intento è quello di individuare e quindi documentare un insieme minimale di dati necessari.

L'approccio è quello di sfruttare le proprietà di documentazione propri degli XML Schema, come è noto infatti è possibile inserire praticamente ovunque *tag* di annotazione (*annotation*) all'interno della specifica di ogni singolo schema.

La struttura del *tag* in questione prevede come elementi figli *tag* denominati *appinfo*, elementi che possono contenere qualsiasi contenuto XML valido. Gli elementi *appinfo* sono intesi per indicare qualsiasi informazione utile alle applicazioni che dovranno utilizzare gli schemi, in altre parole ciò che il requisito in questione richiede.

Il contenuto di tali elementi per ora non viene ulteriormente specificato e potrà essere soggetto ad evoluzione futura, per ora verranno solo qualificati con l'attributo *source* impostato a <http://www.giustizia.it/gl/sgr>. La presenza di tali tag all'interno degli elementi di *annotation* demarcherà informazioni necessarie ai sistemi di cancelleria (sistemi di gestione registri) al momento dell'accettazione dell'atto.

### Dizionario di base specifico per le Esecuzioni

La costruzione della specifica per l'integrazione dei registri in oggetto parte dalla definizione di un dizionario base di tipi specifici, in accordo con l'approccio seguito per il trattamento dei registri già gestiti dalle infrastrutture del Processo Civile Telematico.

Le entità del dizionario, elencate nella tabella seguente, sono definite nel namespace <http://schemi.processotelematico.giustizia.it/siecic/tipibase> e si trovano nel file "tipi-base-siecic.xsd".

### Dizionario Eventi per l'ambito Esecuzioni

Il dizionario degli eventi contiene tutte le entità che definiscono un evento scaricabile da un deposito atto nel contesto dei sistemi oggetto.

Il dizionario è definito nel namespace:

<http://schemi.processotelematico.giustizia.it/siecic/eventi>.

L'approccio seguito è il medesimo adottato per la specifica degli analoghi dizionari nell'ambito dei registri già amministrati dall'infrastruttura del Processo Civile Telematico:

- La definizione di un tipo formalizza la 'segnatura' di una procedura di gestione dell'evento, cioè i suoi parametri di ingresso.
- La definizione di un elemento a cui è assegnato un tipo definito formalizza l'evento vero e proprio.

Un evento è un elemento che deve essere riutilizzato nella definizione di vari tipi di atti, la sua presenza qualifica l'atto e rende chiaro l'intervento da effettuare sui sistemi di cancelleria.

Data la ridotta complessità della mappatura tra atti ed eventi nel contesto dei registri in questione, non è stato fatto un largo uso di elementi di tale dizionario; in altre parole, nella maggior parte di casi, data una tipologia di atto è già chiaro nel contesto dei registri oggetto di integrazione quali sono gli eventi ad esso associati, per cui non c'è necessità di qualificare ulteriormente l'atto. Fanno ovviamente eccezione gli atti generici in cui la presenza dell'evento è necessaria per rendere chiaro l'intervento da effettuare sui sistemi di cancelleria.
